

Progesterone ELISA kit I Fast I Saliva

Ref: SA-E-6300

This ELISA kit enables the measurement of progesterone levels in saliva, which increase significantly after ovulation. Highly relevant for fertility studies, this immunoassay can also be used to monitor early pregnancy, evaluate progesterone-based hormone therapies, and investigate endocrine disorders as well as stress-hormone interactions. Based on a 96-well plate format and offering a non-invasive sampling method, this rapid assay allows for longitudinal progesterone monitoring.

Sample type	Saliva
Capacity	96 tests
Sensitivity	1.1 pg/mL
Range	0/10 – 2,400 pg/mL
Assay time	75 min
Reactivity	Any species

INFORMATIONS

Product name	Progesterone Saliva ELISA Free
Description	<i>In vitro</i> diagnostics / Research enzyme immunoassay (ELISA) for the quantitative determination of active free progesterone in saliva.
Labels	IVD (EU only) or RUO, CE
Format	96-well plate
Samples	Saliva
Sample volume	100 µL
Reactivity	Any species
Standard range	0/10 – 2,400 pg/mL
Sensitivity	1.1 pg/mL
Specificity	No significant cross-reactivity was observed with Progesterone analogs.
Assay time	75 min

PROTOCOLS

Product storage	Store at 2-8°C for up to 6 months
Sample collection & storage	Saliva: collect 5 samples within a period of 2 hours (multiple sampling), before meal. Store samples at 2-8°C for up to one week. For longer periods, store at -20°C.
Sample preparation	Enzymatic conjugation (60 min)
ELISA	Incubation, revelation and read steps (15 min)
Detailed protocol	IVD: Download instructions for use RUO: Download instructions for use
