

Chromogranin A ELISA I Serum Samples I CgA assay

Ref: FR-E-2500-1

The Chromogranin A ELISA kit delivers a straightforward, reliable method for quantifying CgA levels in serum samples, facilitating both the diagnosis and therapeutic monitoring of neuroendocrine tumors (NET)—including carcinoid tumors and pancreatic NETs. Beyond oncology, it also serves as a valuable tool in research on cardiovascular diseases and inflammatory disorders. With excellent correlation to Kryptor CgA II and proven diagnostic performance for GEP-NET, this assay supports rapid, high-precision screening for enhanced patient management and scientific investigation.
