

# Anthranilic acid Antibody – Mouse Monoclonal

Ref: IS013

The monoclonal anti-Anthranilic acid antibody 10G1-F1 was validated for immunohistochemistry (IHC) in human brain tissues. Highly specific, as demonstrated by competitive ELISA, the antibody consistently delivered clean and reproducible stainings.

<b>Clonality</b>	Monoclonal antibody (clone 10G1-F1)
------------------	-------------------------------------

<b>Host</b>	Mouse
-------------	-------

<b>Validated applications</b>	<a href="#">IHC</a>
-------------------------------	---------------------

<b>Reactivity</b>	Reacts with all species
-------------------	-------------------------

<b>Format</b>	50µL
---------------	------

## INFORMATIONS

---

### Product overview

<b>Product name</b>	Anthranilic acid antibody
<b>Synonyms</b>	2-AA antibody Anti- vitamin L1 antibody Anti- Anthranilate antibody Anthranilate antibody 2-Aminobenzoic acidantibody
<b>Immunogen</b>	Conjugated Anthranilic acid
<b>Clone</b>	10G1-F1
<b>Specificity</b>	When tested in competitive ELISA, the anti-anthranilic antibody did not show any significant cross reactivity with 3-hydroxyAnthranilic acid

### Storage

<b>Form</b>	Liquid
<b>Purity</b>	Purified IgG
<b>Concentration</b>	0,5mg/ml
<b>Storage</b>	Store at 4°C
<b>Storage buffer</b>	Store at +4°C for short term (1-2 months). Aliquot and store at -20°C for long term. Avoid repeated freeze / thaw cycles
<b>Material safety datasheet</b>	<a href="#">Download MSDS</a>

## PROTOCOLS

---

<b>Immunohistochemistry (IHC)</b>	Dilute at 1:50-1:500. Perform heat antigen retrieval (pH=6) before initiating IHC staining protocol on paraffin-embedded and frozen sections
<b>Immunofluorescence (IF)</b>	Dilute at 1:50-1:500 on paraffin-embedded and frozen sections. Perform heat antigen retrieval and incubate with incubate with fluorescent secondary antibody conjugate
<b>Comments</b>	Optimal working dilutions must be determined by the end-user
<b>Restrictions</b>	For research use only

### Anthranilic acid detection by IHC in human brain

Immunohistochemical analysis of human caudate-putamen highlights Anthranilic acid accumulation in the cytoplasm of glial cells. Paraffin-embedded brain tissue was subjected to pH=6 antigen retrieval followed by overnight incubation with primary antibody (dilution 1/50). After incubation with polymer conjugated secondary Ab, DAB was used to reveal the staining.

### Affinity & specificity of anti-Anthranilic acid antibody

Competitive ELISA demonstrates that low amounts of Anthranilic acid conjugate are required to abolish antigen-antibody reaction (high affinity), while rising concentrations of 3-OH-Anthranilic acid conjugate do not affect reaction (high specificity).

### Anthranilic acid

Tryptophan catabolism along the kynurenine pathway has been extensively investigated over the past decades for its roles in immune regulation and neurotransmission. Anthranilic acid is synthesized directly from L-kynurenine, to produce 3-hydroxyanthranilic acid without generation of neurotoxic 3-OH-Kynurenine. Recently, Anthranilic acid has been described in organismal death of *C.elegans*, as well as in pathogen *Pseudomonas aeruginosa*'s tryptophan catabolism.
