

L-Phenylalanine ELISA kit I High Sensitivity I Plasma, Serum

Ref: IS-I-1700R

L-Phenylalanine (Phe) is an essential amino acid that cannot be synthesized by humans or other vertebrates and must be supplied from an exogenous diet. Mutations in the gene encoding for PAH have been linked to Phenylketonuria (PKU), an aminoacidopathies - associated with fair skin, eczema, seizures, tremors, and hyperactivity - characterized by an increased blood/brain level of Phe and its derivatives, and a concomitant decrease in Tyr.

In order to provide accurate and easy-to-implement tool to better understand Phe functions, we developed and validated a novel ELISA kit which allows for Phe quantitation in biological samples including plasma and sera. The assay requires a sample volume as low as 20 μ L and is characterized by a 1.7 μ M sensitivity

Sample type Plasma, Serum

Capacity 96 tests

Sensitivity 1.7 μ M

Range 3.4 - 390 μ M

Assay time Sample preparation 3h, ELISA overnight

Reactivity Reacts with all species

INFORMATIONS

Product overview

Product name	L-Phenylalanine ELISA kit
Description	Competitive ELISA kit for the quantitative measurement of L-Phenylalanine (Phe) in plasma and serum samples. For research use only
Format	96-well plate
Samples	Plasma, Serum
Minimal sample volume	20 μ L
Reactivity	Reacts with all species
Standard range	3.4 - 390 μ M
Sensitivity	1.7 μ M
Specificity	No significant cross-reactivity was observed with L-Tyrosine, L-DOPA, Dopamine hydrochloride or Noradrenaline
Assay time	Sample preparation 3h and ELISA overnight
Storage	Store at 2-8°C for up to 6 months
Datasheets	Instructions for use , Material Safety Datasheet

For research use only - Do not use for diagnostic

PROTOCOLS

Sample collection & storage EDTA Plasma
Store samples at 2-8°C for up to 48h or -20°C for longer period (up to 6 months)

Sample preparation Sample preparation (3 hours)

ELISA L-Phenylalanine antiserum overnight incubation, revelation and read steps (1h)

Detailed protocol [Download instructions for use](#)

L-Phenylalanine (Phe) ELISA kit

Validated IS-I-1700 ELISA kit allows for the determination of L-Phenylalanine (Phe) in plasma samples of a volume as low as 20 μ L and with a sensitivity of 1.7 μ M.

Typical standard curve Phenylalanine

Cross-validation of L-Phenylalanine ELISA and LC/MS data in human plasma samples

L-Phe was quantified in human plasma samples from 40 healthy subjects using IS-I-1700 ELISA kit or by LC/MS. Correlation study showed $R^2=0.99$, thereby confirming the accuracy of the immunoassay.
