In Part 3 entries with Note B have a general designation of the following type: 'nitric acid ...%'. In this case the supplier must state the percentage concentration of the solution on the label. Unless otherwise stated, it is assumed that the percentage concentration is calculated on a weight/weight basis.

#### **SECTION 4: First aid measures**

#### 4.1. Description of first aid measures

General information In general, in case of doubt or if symptoms persist, always call a doctor. Never give anything by mouth to an unconscious person.

Following inhalation If person experiences nausea, headache or dizziness, person

> should stop work immediately and move to fresh air until these symptoms disappear. If breathing is difficult, administer oxygen by a qualified person, keep the person warm and at rest. Call a physician. In the event that an individual inhales enough vapour to lose consciousness, person should be moved to fresh air at once and a physician should be called immediately. If breathing has stopped, artificial respiration should be given immediately. In all case, ensure adequate ventilation and provide respiratory

protection before the person returns to work.

IF ON SKIN (or hair): Remove contaminated clothing. Rinse skin Following skin contact

with water / with vegetable oil. Take a shower. If irritation or rash occurs: Get medical advice.

Following eye contact IF IN EYES: Rinse cautiously with vegetable oil for several

minutes. Remove contact lenses, if present and easy to do.

Continue rinsing.

If eye irritation persists: Get medical advice/attention.

Following ingestion IF SWALLOWED: Rinse thoroughly mouth with water. Immediately

call a POISON CENTER/doctor.

Do NOT induce vomiting.

Treat according to symptoms

#### **SECTION 5 : Firefighting measures**

According to Regulation (EC) No 1907/2006

Version 08 Revision: 2024-05-28

#### 5.1. Extinguishing media

<u>Appropriated</u>: Use water spray or other suitable agent on fires adjacent to non-leaking tanks or intact containers of acid. If only a small amount of combustibles is present, smother fire with dry chemical.

**Small fire**: Dry powder or CO2. Move containers from fire area, if it can be done without risk.

**Large fire**: Flood fire area with large quantities of water, while knocking down vapours with water fog. Cool containers with flooding quantities of water until well after fire is out. Do not get water inside containers. Withdraw immediately in case of rising sound from venting safety devices or discoloration of tank.

<u>Non-appropriated</u>: Do not use solid water streams near ruptured tanks or spills of sulfuric acid.

# 5.2. Special hazards arising from the substance or mixture

Acid reacts violently with water and can spatter acid onto personnel.

Reacts with most metals, especially when diluted: Hydrogen gas release, which is extremely flammable and explosive. Risk of explosion if acid combines with water, organic materials or base solutions in enclosed spaces. Mixing acids of different strengths/concentrations can also pose an explosive risk in an enclosed space/container.

# 5.3. Advice for firefighters

Add chemical safety goggles if eye protection is not provided. Wear full protective clothing.

Evacuate personnel to a safe area. Keep personnel removed and upwind of fire. Wear full protective clothing. Neutralize run-off with lime, soda ash, to prevent corrosion of metals and formation of hydrogen gas. Wear self-contained breathing apparatus if fumes or mists are present.

#### **SECTION 6: Accidental release measures**

6.1. Personal precautions, protective equipment and emergency procedures

Evacuate all personnel from danger area. Use required personal protective equipment.

Remove sources of ignition.

DO NOT smoke. Stop flow if possible.

**6.2. Environmental** precautions

Avoid release to the environment.

Avoid contamination of drains, surface water and groundwater.

6.3. Methods and material for containment and cleaning up

**SMALL SPILL**: Soak up with dry sand, clay or diatomaceous earth.

**LARGE SPILL**: Dike. Cautiously dilute and neutralize with lime or soda ash. Adequate ventilation is required during neutralization due to release of CO2 gas. Transfer to waste water treatment system. Prevent liquid from entering sewers, waterways. Product not recovered or sent as waste for treatment should be reported to authorities.

6.4. Reference to other sections

Refer to sections: 7 safe handling, 8 for personal protective equipments, 13 for disposal.

#### SECTION 7: Handling and storage

According to Regulation (EC) No 1907/2006

Revision: 2024-05-28

7.1. Precautions for safe handling

DO NOT get in eyes, on skin, or on clothing. DO NOT ingest: Avoid breathing vapours or mist. Wear approved respirators if ventilation is not adequate.

No eating, drinking and smoking when handling the product.

Wash hands thoroughly after handling.

**NEVER** add water to acid.

7.2. Conditions for safe storage, including any incompatibilities

Store in a cool, well-ventilated area, away from incompatible

substances. Protect from physical damage.

Keep out of sun and away from heat (more than 275 °C). If stored in metal containers, vapours can contain explosive hydrogen

.

Do not smoke in storage area.

**7.3. Specific end use(s)** No data available.

#### SECTION 8: Exposure controls/personal protection

#### 8.1. Control parameters

Components with critical values that require monitoring at the workplace:

#### Sulfuric acid:

Limit value (8h): 1 mg/m<sup>3</sup>

Limit value (Short term): 3 mg/m<sup>3</sup>

#### 8.2. Exposure controls

Appropriate engineering controls

Good general ventilation should be provided to keep vapour and mist concentrations below the exposure limits.

<u>Eye/face protection</u>: Wear safety glasses with non-perforated shields. Add a face shield (close-fitting) if pouring liquid. For leak, spills emergency or heavy handling, use chemical safety goggles or a full face shield. Do not wear contact lenses.

<u>Respiratory protection</u>: Not required when using a closed ventilation system. If acid concentration is above 1 mg/m³, wear a gas mask with acid gas canister equipped with particulate filter. If the concentration is higher than 10 mg/m³, use an efficiency particulate respirator, or self-contained breathing apparatus with full face piece.

Other: Wear acid resistant gloves (preferably rubber), boots; long sleeve wool, acrylic, or polyester clothing under an acid proof suit. Trouser legs should be outside boots. An apron can be used in place of acid proof suit in laboratory environment, or in handling small volumes of sulphuric acid. In case of emergency, wear a complete acid suit with hood, boots, and gloves with respiratory protection.

Environmental exposure controls

Avoid release to the environment
